

## Kishore Rayudu

Sr. QA Automation Engineer | Java | Selenium | Appium | Cucumber | BDD | Rest API | DevOps | GenAI

8717 Denstone Dr, McKinney, TX 75070.

(469)525-3629/ kishorerayudu1995@gmail.com

Portfolio: <https://kishorerayudu.netlify.app/>

LinkedIn: <https://www.linkedin.com/in/kishore5335>

### PROFESSIONAL SUMMARY

- Experienced and Certified software QA Test Engineer for around 9 years in **Java, Selenium (Web/Mobile), Manual Testing, Appium, API Testing**, and **end-to-end Agile** software QA practices.
- 2+** years of experience in leading a QA team for project testing and deliverable.
- Automated test suites using **Selenium WebDriver, TestNG, Rest Assured, and Appium**, reducing manual effort by **65%** and enabling **60–70% faster** release cycles.
- Built and maintained **hybrid, data-driven, keyword-driven, Serenity**, and **BDD frameworks** (Cucumber, JBehave), improving test **scalability** and reducing maintenance time by **50%**.
- Conducted **backend** testing using **MSSQL and JDBC**, and validated **APIs** via **Postman** and **Rest Assured**, catching **25–30%** of integration issues pre-release.
- Used **GitHub, Azure DevOps, Jenkins, and AWS (EC2, S3)** to manage **CI/CD pipelines** and cloud-based test environments, improving build stability by **35%** and deployment speed by **40%**.
- Strong understanding of APIs and practical experience with core AWS services.
- I am skilled in using deployment templates like AWS SAM, YAML, and JSON.
- Experienced in setting up and maintaining CI/CD pipelines with Jenkins, GitHub Actions, and AWS CodePipeline.
- Reduced manual effort and increased efficiency in test case preparation, RTMs, and documentation by **30–40%** using **GenAI** and **GitHub Copilot**.
- Performed **performance testing** using **JMeter** (load, stress, soak, spike) and **security testing** using **OWASP ZAP**, improving app reliability and identifying **vulnerabilities** like **XSS** and **SQLi**.
- Strong experience in translating business requirements into test cases using **Jira, Confluence**, and **Azure Boards**, achieving over **95%** test coverage and traceability.
- Delivered high-quality mobile and cross-browser testing across Android, iOS, and tablets, ensuring 98% device compatibility and reduced defect leakage.

| Core Competencies:                                                                   | Technical Skills:                                                                                                                                                                                                                 |

## EDUCATION

Bachelor of Technology in Civil Engineering at Jawaharlal Nehru Technological University, India - 2016

## CERTIFICATION:

ISTQB Certified Tester – Advanced Level Test Automation Engineer (CTAL-TAE)

ISTQB Foundation Level Certification (CTFL)

AWS Certified Developer – Associate

Azure Administrator Associate

Lean Six Sigma – Certified White Belt

## PROFESSIONAL EXPERIENCE:

**Sr. Automation Test Engineer | 7 Eleven | Irving, TX**

**May 2025 – Present**

### Responsibilities:

- Developed and maintained automated test scripts using **Selenium WebDriver** and **Cucumber**, supporting both UI and integration testing in fast-paced Agile environments.
- Developed and maintained test automation frameworks using **Java, Selenium, TestNG, Maven, and BDD Cucumber**, reducing manual testing by **60%**.
- Integrated automated tests into **Jenkins** pipelines, improving release speed and identifying bugs earlier in the development cycle.
- Built data-driven test scripts using **Apache POI**, allowing efficient execution of multiple scenarios with a single script.
- Created and tested **GenAI**-based insurance onboarding features, ensuring accurate chatbot flows, calculations, and product suggestions.
- Carried out bias and safety checks on AI outputs using Detoxify and prompt injection techniques, reducing incorrect or unsafe responses by **30%**.
- Worked closely with AI and engineering teams to fine-tune prompts, apply fallback logic, and follow data privacy standards.
- Automated mobile app testing with Appium for Android and iOS and used Browser Stack and PCloudy for reliable cross-device and browser testing.
- Contributed around **40%** of testing efforts by **designing, executing, and maintaining** detailed manual test cases and scenarios based on functional requirements and user stories, ensuring thorough coverage.
- Led manual testing for UI, functional, regression, and edge cases, improving defect detection by **30%** and reducing escaped defects by **25%**.
- Collaborated closely with cross-functional teams during test case reviews, updating and refining manual test cases to maintain accuracy and reduce redundancy by 20%.
- Logged detailed defects with clear reproduction steps during manual execution and used **JIRA** and **Zephyr** to track test progress, supporting efficient bug resolution and test management.
- transaction success by **20%**.
- Analyzed server logs and error reports to quickly resolve transaction issues, improving reliability and customer satisfaction.
- Planned and led various testing cycles (**smoke, sanity, regression, UAT, exploratory**) to support timely, high-quality product releases.
- Used tools like **JIRA** and **ServiceNow** to track test coverage, manage defects, and maintain clear documentation

**Senior Software Engineer – QA | Helius Compu-tech Pvt Ltd – Hyderabad****Nov 2024 – Apr 2025****Responsibilities:**

- Participated in sprint planning, daily stand-ups, and backlog refinement sessions, ensuring clear understanding of user stories and complete test coverage.
- Reviewed business requirements and functional specs to identify gaps early and align testing with stakeholder expectations.
- Designed and executed end-to-end test cases in Agile environments, contributing to faster and more stable feature releases.
- Built a robust, data-driven Page Object Model (POM) framework using Java, Selenium, TestNG, and Apache POI, improving maintainability and reusability.
- Used Apache POI to manage external test data from Excel, enabling flexible and scalable test scenarios.
- Developed BDD automation with Cucumber by writing clean, reusable feature files and step definitions, improving collaboration with non-technical stakeholders.
- Performed system, UAT, regression, smoke, and exploratory testing, delivering detailed reports to support go/no-go decisions.
- Conducted API testing with Postman and HTTP libraries to validate service endpoints, reducing integration issues in production.

**Senior Software Engineer – QA | Staffice Global Pvt Ltd – Chennai****Sep 2023 – Aug 2024****Responsibilities:**

- Led a team of 6 QA engineers, managing testing for hybrid mobile and web apps and helping reduce post-release defects by 40% through structured quality processes.
- Created detailed test plans, cases, and scripts from functional and database-level requirements, increasing test coverage by 95% and improving traceability.
- Reviewed documentation and backlog items to ensure alignment with acceptance criteria, reducing test gaps by 30% across multiple sprints.
- Participated in all Agile ceremonies (planning, reviews, retrospectives, grooming, releases), improving cross-functional coordination by 25%.
- Automated critical regression suites using Java, Selenium, TestNG, Maven, IntelliJ, Eclipse, and Log4j—cutting manual effort by 60% per sprint.
- Designed modular, data-driven frameworks (POM) that improved test reusability and reduced maintenance effort by 50% across projects.
- Performed REST API testing using Postman, validating request/response flows and preventing 20% of backend integration issues pre-release.
- Used Jenkins for CI/CD automation and integrated TestNG reports and screenshot capture, reducing failure triage time by 40%.

**Senior Software Quality Engineer | Inovalon India Pvt Ltd – Hyderabad****Mar 2023 – Aug 2023****Responsibilities:**

- Reviewed functional specifications, business requirements, and user stories; actively participated in sprint planning, daily stand-ups, and other Scrum ceremonies
- Participated in sprint planning, daily stand-ups, and reviewed requirements for complete coverage.
- Created and executed end-to-end test cases in Agile development environments.
- Implemented data-driven POM framework using selenium webdriver for node.js application
- Used Apache POI to manage Excel test data.
- Conducted system, UAT, regression, smoke, and ad-hoc testing with detailed reports.
- Used Maven for dependency management and Jenkins for CI and scheduled automation runs.

- Built robust Selenium framework using Java, Eclipse, TestNG, and Apache POI.
- Developed BDD automation using Cucumber, authored feature files and step definitions.
- Performed parallel test execution using TestNG, optimized test suite efficiency.
- Conducted API testing with Postman and HTTP libraries, validated service functionality.
- Wrote complex SQL queries using JDBC for backend data validation and integrity checks.

## Senior QA Associate | Freyr Software Services – Hyderabad

Feb 2021 – Feb 2023

### Responsibilities:

- Designed comprehensive end-to-end test scenarios for **B2B and B2C eCommerce** platforms, covering product search, cart, checkout, and order confirmation, improving customer satisfaction by 25% through smoother user journeys.
- Used Postman to test APIs for catalog, inventory, pricing, and order placement, identifying and resolving 30% of integration issues before production deployment.
- Performed functional and UI manual testing, identifying over 100 defects before release and reducing production issues by 35%
- Created and executed more than **300+** manual test cases aligned with business requirements, achieving 95% coverage and reducing requirement-related gaps
- Used JIRA to log, track, and manage defects, enhancing SLA compliance for bug resolution by 20% through detailed reporting and active follow-up
- Worked closely with developers and product managers during Agile sprints, shortening the feedback loop between testing and development by 40%
- Led regression testing of UI and APIs across multiple environments, helping maintain 99% system stability during production releases
- Developed Selenium automation scripts with TestNG for regression and smoke testing across multiple browsers, ensuring consistent functionality and reducing cross-browser defects by 40%.
- Built scalable automation frameworks using TestNG, Cucumber (BDD), POM, and Rest Assured, increasing test maintainability and reducing script development time by 50%.
- Conducted manual UI/UX testing across browsers and screen sizes, catching 15% more edge-case bugs that automated tests missed, enhancing user experience.
- Validated backend services and APIs, including ERP integrations and AWS-hosted microservices; managed Jenkins pipelines for CI/CD, improving build stability and deployment frequency by 35%.
- Collaborated on credit card servicing features (payments, transactions, account updates), ensuring flawless workflows and reducing payment failures by 20%.
- Aligned testing strategies with organizational and financial system standards, maintaining compliance and minimizing audit findings.
- Tested end-to-end credit card transaction workflows, detecting issues early to sustain system reliability and improve transaction success rates by 18%.

## Automation Test Engineer | Unilog Content Solutions – Mysore

Aug 2016 – Nov 2020

### Responsibilities:

- Designed end-to-end test scenarios for B2B/B2C eCommerce platforms and workflows.
- Performed API testing using Postman for catalog, inventory, pricing, and orders.
- Created Selenium/TestNG automation scripts for cross-browser regression and smoke testing.
- Built frameworks with TestNG, Cucumber, POM, and API Rest Assured testing.
- Conducted manual testing for UI/UX, browser compatibility, and edge case detection.
- Validated ERP/API integrations, microservices on AWS, and CI/CD pipelines via Jenkins.

**New Learning and Implementations by understanding and utilizing AI tools :**
